# MACON CHARTER

Little Boy

The splitbarge can be pushed, if required, via its aft where a mould is integrated.

In the bow a 400 kW bow thruster is integrated, 360° rotating.

Thus mooring of this big barge alongside is made relative easy.

The steering of the thruster and the splitting operation is remotely controlled.

The main powerpack to drive the H-system and the 2 x generators are all water cooled by means of boxcoolers.

Little Boy
